BLITZKRIEG: The Final World War Simulation

Official Rulebook & Guidebook

Overview

The game is a grand strategy simulation divided into three phases, with six participating teams. Each team must form alliances, develop synergies, and ultimately prepare for the Final World War.

Initial Corpus: 1.2 Million Bars of Gold (1,200,000 Bars)

Phase 1: Alliances

Objective

*To form the most **synergistic** three-nation alliance, as synergy directly influences combat effectiveness in Phase 3.*

Nation Classification

Each team will control three nations, one from each of the following power tiers:

1. **Superpower**
2. **High Power**
3. **Low Power**

Each nation has unique synergy values with other nations, affecting overall team synergy.

Synergy Calculation

The synergy of each team's chosen nations is calculated as:

$$Team\ Synergy\ Score = (AB + AC + BC)/3$$

where **AB, AC, and BC** are synergy values between the three nations in the team.

Higher synergy results in stronger Attack and Defence power in Phase 3.

Step 1: Indexing & Initial Challenge

The **Index Order (1 to 6)** for all subsequent rounds will be determined on a '**first come, first served**' basis before the nation selection begins.

Since the Index can significantly impact your strategy, arriving early is highly recommended to secure this advantage. [Reporting Time: 9:00 a.m.]

Step 2: Nation Selection

- Teams will select nations in the order of their assigned Index (1 → 6).
- The cards for Low Power Nations, High Power Nations, and Superpowers will be placed face-down (blind selection) on the table.
- Each team, starting from Index 1, will pick one card from each of the three sets without seeing their choices, in a single turn.
- This process continues sequentially until all teams have made their selections.

Step 3: The Grand Council (Alliance Negotiations)

"The Grand Council of Nations"

All teams' nations and synergies will be publicly disclosed, allowing participants to strategize for **The Grand Council of Nations**—a high-stakes diplomatic table where:

- **Nation Cards Can Be Traded:** Teams may exchange nations **within the same power tier** (Low for Low, High for High, etc.), provided both parties agree. [Involvement of Money transfer is valid]
- **Strategic Talks & Agreements:** Secret pacts, future alliances, and trade promises can be made to strengthen positions.

• Various factors influence trade decisions, including, but not limited to, **zones** and **proximity to specific nations.**

Rounds of The Grand Council:

1. **Proposal Round (Index 1 → 6) [7 minutes]**
    - Each team, in turn, announces their **trade proposals** (same-tier nation exchanges).
    - Monetary offers can also be publicly declared.
    - **No convincing or discussions**—just proposals. Multiple proposals allowed.
2. **Acceptance Round (Index 1 → 6) [3 minutes]**
    - Each team, in turn, **announces if they accept any trade proposals** made earlier.
    - **No negotiations**—only acceptance or rejection.
3. **Open Negotiation Round [10 minutes]**
    - Participants can leave their seats to engage in **direct negotiations.**
    - Trades, money transactions, and **verbal agreements for future alliances** are allowed.
    - Deals must be finalized within the time limit.
4. **Final Instant Trade Round**
    - Teams remain seated. Any team can **raise their hand to propose a final trade**.
    - If another team **immediately accepts**, the trade is confirmed on the spot.

After **The Grand Council**, Phase 1 concludes, and teams proceed with their final nations into Phase 2.

Phase 2: Training Camp [20 minutes]

Objective

This phase focuses on military preparation, allowing teams to train and allocate troops while making strategic decisions regarding weaponry advancements. These choices will significantly impact their performance in the war phase.

Step 1: Troop Capacity and Distribution [2,500 Troops]

Each team is allocated **2,500 troops**, but they must be distributed among the three countries in their alliance according to the following capacity limits:

Nation Type	Maximum Health	Maximum Troop Capacity
Super Power	500 HP	1,800 Troops
High Power	300 HP	1,200 Troops
Low Power	100 HP	700 Troops

Teams must strategically distribute their forces to maintain a balance between strength and security. Concentrating too many troops in one location may leave other areas vulnerable.

Step 2: Distance and Cost Considerations

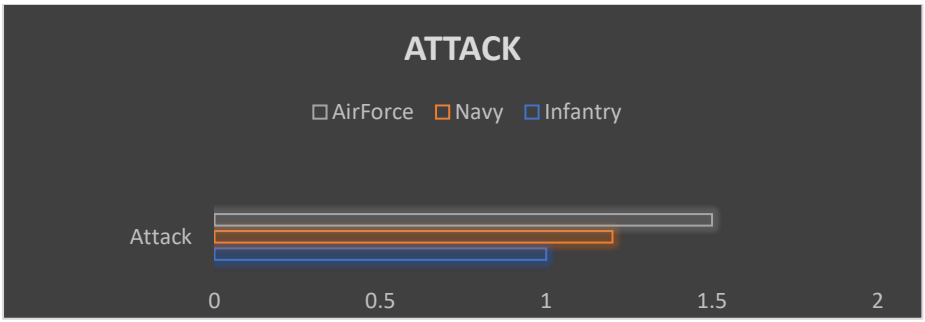

Each country has a predefined **Distance Matrix** affecting two critical aspects of the game:

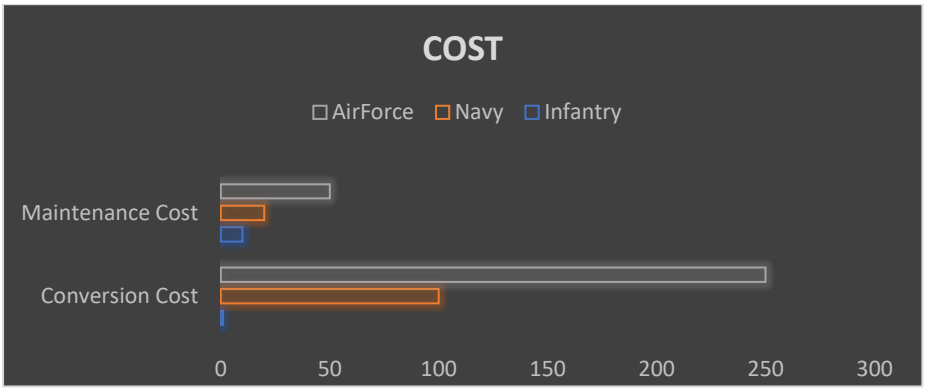

1. **Attack Costs:** The cost of launching an attack increases proportionally with the distance between the attacking and target country.
2. **Troop Reallocation Costs:** The expense of moving troops between countries is directly proportional to the distance covered.

Teams should carefully assess the **Distance Matrix** before proceeding to the next phase, as it will play a crucial role in resource management and strategic planning.

Step 3: Troop Training and Conversions

Each team starts with **2,500 Infantry Troops**, which may be upgraded into specialized units with higher capabilities.

Base Army Troop Specifications

- **Attack and Defense Power:** 1
- **Maximum Distance Covered:** 9,000 km
- **Maintenance Cost After Each "Table of Peace" in Phase 3:** 10 Gold Bars per troop

Teams can invest in troop upgrades to enhance combat effectiveness:

Naval Troops

- **Conversion Cost:** 100 Gold Bars per troop
- **Attack and Defense Power:** 1.2
- **Maximum Distance Covered:** 12,000 km
- **Maintenance Cost:** 20 Gold Bars per troop

Air Force Troops

- **Conversion Cost:** 250 Gold Bars per troop
- **Attack and Defense Power:** 1.5
- **Maximum Distance Covered:** Unlimited
- **Maintenance Cost:** 50 Gold Bars per troop

Troop conversion decisions should be made carefully, as higher-tier units offer increased mobility and firepower but come with greater maintenance costs.

Step 4: Maintenance Costs and Consequences

At the end of every **Table of Peace** in Phase 3, all teams must pay the required maintenance costs for their troops alive.

Failure to Pay Maintenance Costs

If a team is unable to meet its financial obligations, **all of their countries will be confiscated by The Lords**.

Step 5: War Council and Initial Positioning

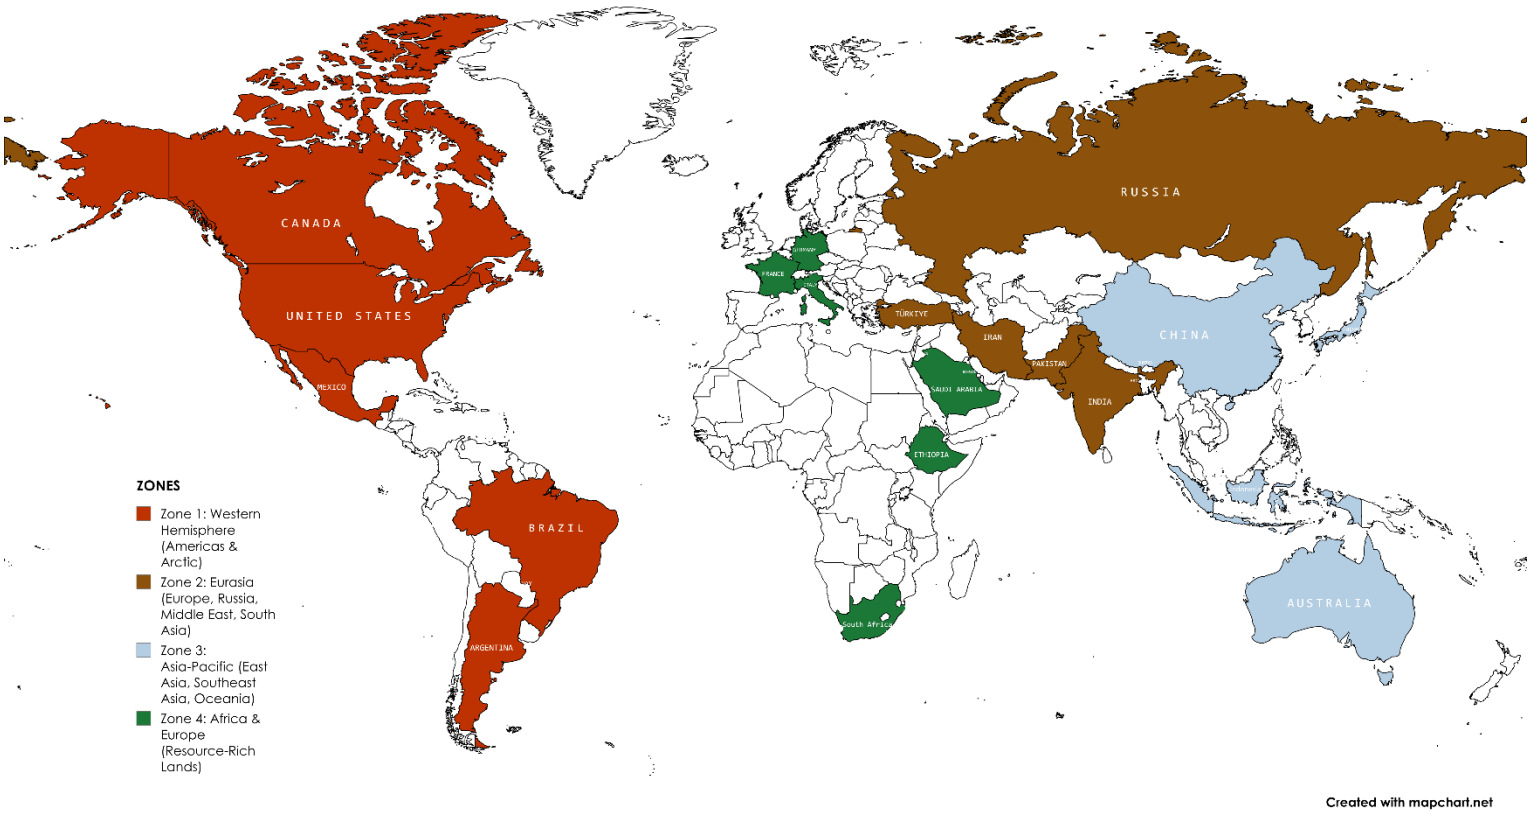

- Each team **allocates their troops** (specifying air, naval, and land units) among their three controlled countries, adhering to the **troop capacity limits** outlined.
- Each country is provided with a **world map** divided into **four zones**:

ZONE 1: WESTERN HEMISPHERE

ZONE 2: EURASIA

ZONE 3: ASIA-PACIFIC

ZONE 4: AFRICA AND EUROPE

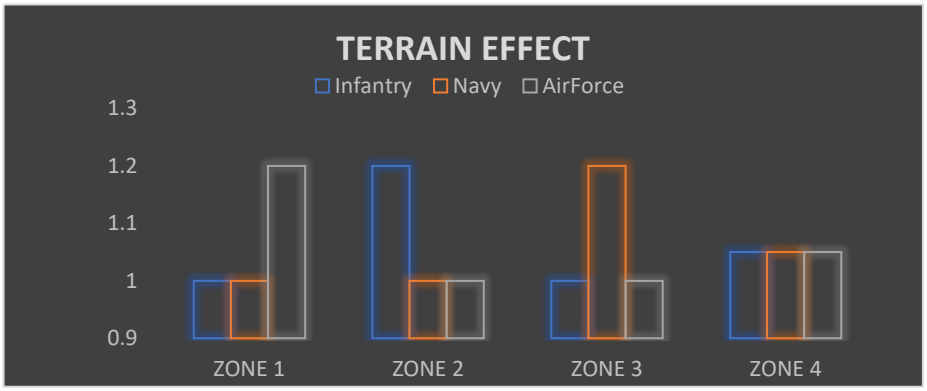

Terrain-Based Combat Modifiers

To enhance strategic depth while maintaining balance, this system introduces terrain-based modifiers that impact combat outcomes. The defender's terrain determines the battle conditions, ensuring consistency and fairness.

The world is divided into four distinct zones, each with a uniform terrain type. The attacking nation's terrain has no effect—only the defender's terrain influences the battle.

World Zones & Terrain Effects

Each zone represents a geographical region with relatively uniform terrain conditions, allowing for standardized effects in combat**.**

Zone 1: Western Hemisphere (Americas & Arctic)

- Countries: United States, Brazil, Mexico, Argentina, Canada
- Terrain Type: Urban & Arctic
- Combat Modifier: Air Power +20% (Air superiority plays a crucial role in defense)
- Strategic Impact:
    - Nations in this region rely on advanced air defense systems and urban warfare strategies.

Zone 2: Eurasia (Europe, Russia, Middle East, South Asia)

- Countries: Russia, Turkey, Iran, Saudi Arabia, India, Pakistan
- Terrain Type: Mountainous & Desert
- Combat Modifier: Land Attack +20% (Attacking land forces suffer a reduction in effectiveness)
- Strategic Impact:
    - Harsh geography, including mountains, deserts, and rugged landscapes, makes large-scale invasions difficult.
    - Defenders can leverage natural barriers to reduce incoming land-based attack effectiveness.

Zone 3: Asia-Pacific (East Asia, Southeast Asia, Oceania)

- Countries: China, Japan, Indonesia, Australia
- Terrain Type: Oceanic & Coastal
- Combat Modifier: Naval Power +20% (Naval units are significantly stronger in defense)
- Strategic Impact:
    - Nations in this zone are highly dependent on maritime dominance.

Zone 4: Africa & Europe (Resource-Rich Lands)

- Countries: South Africa, Ethiopia, European Union (Germany-France-Italy)
- Terrain Type: Plains & Jungle
- Combat Modifier: Air Power +5%; Land Attack +5%; Naval Power +5%;
- Strategic Impact:
    - These regions offer equal battle conditions.
    - The flatlands and diverse ecosystems prevent any one military strategy from being inherently superior.

Uniform Combat Regulations

- The attacking nation's home terrain does not affect battles.

This phase serves as the foundation for the war phase. The teams that make informed and balanced decisions will have a competitive advantage when entering **Phase 3: The Final World War.**

Phase 3: The Final World War

Objective

Phase 3 is the ultimate battle, where teams execute strategic military maneuvers, allocate resources, form alliances, and engage in combat. The war continues until only two teams remain on the map, determining the victor.

Before the first round of attacks, all teams have the option to purchase a One Time Use Upgrade.

- 10 minutes will be given to evaluate upgrades and finalize attack strategies.
- Teams will then, in turn, report their attack data to the Combat Marshals, specifying:
    - Attacking Nation → Target Nation
    - Number of All Three Types of Troops

Step 1: Battle Commencement

Each round follows a structured sequence where each team must attack.

Turn-Based Action System

Team 1 initiates the round with an Attack

Attack an Enemy Country

$$\textit{Attack Cost} = (\textit{No. of Army Troops} * \textit{10 Gold Bars} + \textit{No. of Naval Troops} * \textit{25 Gold Bar} + \textit{No. of Air Troops} * \textit{50 Gold Bar}) * \textit{(Distance in kms)/1000}$$

Attack moves (only the names of the nations) will be announced immediately after the Team's turn by **The Watchers**.

The turn proceeds sequentially to **Team 2, Team 3**, and so on until **Team 6** completes their action.

Minimum Troops for an Attack (For the First 3 Rounds)

From a Low Power Nation: 150
From a High Power Nation: 250
From a Super Power Nation: 300

If the number of troops in a Nation is lesser than the limits given above, all of the troops of the Nation present must participate in the Attack.

[ONE TIME USE UPGRADATIONS] [GAME LIMIT: 4]

Fortification Upgrade - **120,000 Gold Bars**

A **nation** that invests in fortification gains enhanced defensive capabilities. When under attack, the damage received is reduced to **50% of the original attack power** (i.e., the [ATTACK] of the opponent team is only **0.5× effective**). This significantly strengthens the country's resilience against enemy offensives.

Nuclear Weaponization - **120,000 Gold Bars**

A **nation** that develops nuclear capabilities gains a massive offensive advantage. When launching an attack, the **effective attack power is doubled (**2× [ATTACK] multiplier**)**, making it a formidable force in warfare.

After the upgrade power had been used once (Attack on your Fortified Nation, Attack with your Nuclear Weaponised Nation), your stats will revert to their original values.

Step 2: Combat Mechanics

Combat Outcomes

1. **Successful Attack**

   All Defending Troops die.

   The Surviving Attacking Troops will return in the ratio in which they were sent in the Attack

   No. of Troops returned will be immediately updated to the **Combat Marshal** of the Attacking Nation

   Health Points of the Defending Country will be updated to the **Combat Marshal** of the Defending Nation

2. **Failed Attack**

   The HP of the Defending Country remains the same as before the attack.

   All Attacking Troops die.

   Defending Nation’s Troops will survive in the ratio in which they were present in the Defending Nation before the attack.

   No. of Troops surviving will be immediately updated to the **Combat Marshal** of the Defending Nation

---

Step 3: Cryptic Reallocation Announcement

After every table of Peace, troop reallocations are announced in a **cryptic format** (e.g., *"Reallocation has been observed in the Zone 1"*).

No announcements of SINGLE ROUND UPGRADATION

Step 4: Table of Peace - Diplomacy & Alliances

TABLE OF PEACE

After every full round (one complete cycle of six turns), a **15-minute Table of Peace** session occurs.

Purpose of the Table of Peace

During this phase, teams may:

- **Negotiate and form alliances** (alliances are based on trust and are semi-binding).
- **Plan joint attacks** against common enemies.
- **Exchange monetary resources** in return for troop reallocations or strategic advantages.
- **Discuss potential strategies** to counter stronger opponents.

Introduce Temporary Binding Agreements

- During **Table of Peace**, teams can create a **Signed Pact** [All details must be specified]
    - A **betrayal** results in **publicly losing 120,000 Gold Bars** (economic penalty).

Mechanism of Reallocation of Troops to One's Own Nations (if capacity allows)

$$\textit{Reallocation Cost} = (\textit{No. of Army Troops} * \textit{2 Gold Bar} + \textit{No. of Naval Troops} * \textit{5 Gold Bar} + \textit{No. of Air Troops} * \textit{8 Gold Bar}) * (\textit{Distance in kms})/1000$$

Mechanism of Reallocation of Troops to Other's Nations (if capacity allows)

No of troops, supplying nation and receiving nation shall be written clearly on the **Signed Pact**

$$\textit{Reallocation Cost} = (\textit{No. of Army Troops} * \textit{2 Gold Bar} + \textit{No. of Naval Troops} * \textit{5 Gold Bar} + \textit{No. of Air Troops} * \textit{8 Gold Bar}) * (\textit{Distance in kms})/1000$$

Reallocation moves are kept confidential and announced cryptically at the end of the round by **The Watchers**.

This is an **open-table discussion** with no restrictions on communication. However, **betrayals and broken promises in Signed Contracts carry penalties**, making deception a viable yet risky tactic.

GLOBAL EVENTS

Every **Table of Peace phase** (between turns in Phase 3), a **global event** may occur:

- **Positive Events (Boosts Struggling Teams)**
    - "Foreign Aid Package" → A war-based statistics question will be given, upon solving which, the team gets **50,000 Gold Bars** Free Supply to all the Teams.
    - "Black Market Deals" → All teams can **buy Discounted Nuclear Weaponisation and Fortification Upgrade for 1 round**.
- **Negative Events (Prevent Overpowered Teams)**
    - "Economic Crisis" → All the team **loses 20% of their Gold Bars**.
    - "Fuel Shortage" → Air Force **temporarily disbands.**

      And any such other **Global Event** can occur

Step 5: War Progression

The cycle of **Military Actions** → **Table of Peace** → **Military Actions** continues until only **two teams remain** on the map.

Step 6: Victory Conditions

Ranking Determination

1. **Rank 1 and Rank 2** are determined based on the number of **remaining controlled countries** at the end of the war.
2. **If a tie occurs**, the **economic strength** of the tied teams will be compared to determine the winner.

The team with superior strategic planning, military efficiency, and diplomatic maneuvering will emerge victorious.

APPENDIX

FORMULAES USED IN THE GAME CODE

$$[ATTACK] = (af1 * 1.5 + n1 * 1.2 + ar1 * 1) * S1 * N * (F \text{ (for opponent only)})$$

$$[DEFENSE] = (af2 * TEAF * 1.5 + n2 * TEN * 1.2 + ar2 * TEAr * 1) * S2$$

$$[DAMAGE] = [ATTACK] - [DEFENCE]$$

$$[IMPACT\ RATIO\ A] = [DAMAGE]/[ATTACK]$$

$$[IMPACT\ RATIO\ D] = [DAMAGE]/[DEFENSE]$$

Where:

- **af1, n1, ar1** = No. of Attacking country's air force, naval, and army troops
- **af2, n2, ar2** = No. of Defending country's air force, naval, and army troops
- **S1, S2** = Synergy multipliers for Attacking Nation and Defending Nation respectively.
- **TEAF, TEN, TEAr** = Terrain effect [AirForce, Navy, Army respectively] [only in Defense]
- **N** = Nuclear effect [only in Attack]
- **F** = Fortification effect [only in Defense]

1. Number of Troops Returning to the Attacking Nation after a Successful Attack

[DAMAGE] > 0

$$Net\ Effect\ on\ the\ HP\ of\ the\ Defending\ country =$$

$$[HEALTH\ OF\ THE\ COUNTRY\ IN\ HP] - [DAMAGE]$$

All Defending Troops die.

Attacking Nation's Troops will return in the ratio in which they were sent by the Attacking Nation in the attack.

No. of Troops to Return: $No.\ of\ Troops\ Sent * [Impact\ Ratio\ A]$

For example: If the troops sent were (Army 100: Navy 150: AirForce 200) (Ratio 2/9:3/9:4/9) by the Attacking Nation Consider the Synergies 1 and [DEFENSE] = 180
Now, [ATTACK] = 580, [DAMAGE] = 400, [Impact Ratio A] = 0.69

No. of Troops to Return = 450 * 0.69 = 310
No. of Army Troops of Defending Country to return = 310*2/9=69
No. of Naval Troops of Defending Country to return = 310*3/9=103
No. of AirForce Troops of Defending Country to return = 310*4/9=138

2. Number of Troops Surviving in the Defending Nation after a Successful Defense

[DAMAGE] < 0

The HP of the defending country remains the same as before the attack.

All Attacking Troops die.

Defending Nation's Troops will survive in the ratio in which they were present in the Defending Nation before the attack.

No. of Troops Surviving in the Defending country: *No. of Troops Present * [Impact Ratio D]*

3. Terrain Effects

Zone 1: Western Hemisphere (Americas & Arctic)

Example: If China attacks the United States, the U.S. air force will have increased effectiveness due to advanced air defense infrastructure.
In working that is, (*af*2*1.25) instead of af2 (in calculation of [DEFENSE])

TEAF = 1.25

Zone 2: Eurasia (Europe, Russia, Middle East, South Asia)

Example: If some country attempts to invade Russia, Russia's land forces' effectiveness will be increased by 20%, simulating the challenges of fighting in Russia's vast and rugged landscape. In working that is, (*ar*2*1.2) instead of ar2 (in calculation of [DEFENSE])

TEAr = 1.2

Zone 3: Asia-Pacific (East Asia, Southeast Asia, Oceania)

Example: If the United States attempts an invasion on Japan, Japan's navy will receive a +20% bonus, reflecting its robust maritime defense capabilities. In working that is, (*n*2*1.2) instead of n2 (in calculation of [DEFENSE])
TEN =1.2

Zone 4: Africa & Europe (Resource-Rich Lands)

Example: If the United States attempts an invasion of South Africa, South Africa's Army, Navy and Air Force will receive a +5% bonus each, reflecting its robust maritime defense

capabilities. In working that is, (ar2*1.05+*n*2*1.05+af2*1.05) instead of ar2+*n*2+af2 (in calculation of [DEFENSE])

TEAr = 1.05 ; TEN = 1.05; TEAF = 1.05
